RedOracle.com â€™ Threats & Risk Analysis

Today the ICT's world is changed considerably. While before protecting the ICT security systems meant building up a wall between the own internal network and the external world, today it's not more so easy to protect the information to ensure an ongoing operativity of the systems.

Conduct of business or sector intervention, in order to identify the threats and attacks' scenario, the consequent level of risk and fixes definition.

System Design and Specification

RedOracle.com recognizes that information security management is a dynamic and continuously developing process. RedOracle.com draws on a wealth of experience to assist you in the design and specification of an integrated security solution that addresses your business needs.

Policy and Procedures

RedOracle.com has developed a secure policy service â€™ this helps organizations understand their exact security position vis-à-vis current regulations (e.g. HIPAA,BS7799 etc.). RedOracle will work hand-in-hand with management to help you ascertain your organization's attitude to risk-taking and exposure. Armed with this information we help you devise a new security policy from the ground up, or revise an existing policy.

Compliance Testing

RedOracle conducts compliance testing in relation to existing company compliance documents or with regard to HIPAA, Sarbonne Oxley, BS7799 etc. Through gap analysis, Red Oracle will deliver a comprehensive report on your operational, procedural and documentation compliance.

Outsourced Security Personnel

Support the client with expertise and knowledge, useful to direct the strategies and facilitate the choices in ICT field. RedOracle offers security expertise without the overheads. From short term to long term projects, RedOracle can provide the security knowledge needed to ensure a secure business.

Infrastructure Reviews

By providing an informed and independent assessment of critical infrastructures and applications, RedOracle can help you ensure that your risk is reduced and your investment maximized through well-designed technology and process components.

Security Audits and Penetration Testing

RedOracle performs comprehensive testing and reviews of your existing security platform and procedures in accordance with recognized standards for auditing and penetration testing. Regular testing is essential to ensure that your systems continue to be protected despite the development of new attacks.
